

The iManage Knowledge Journey

Your knowledge journey is endless, but it starts with the right software.

1. iManage Knowledge Work

Your iManage DMS contains documents, emails and a range of content containing insights and information that could be turned into knowledge.

Work/DMS

2. iManage Knowledge Workspaces

By creating knowledge workspaces for practice groups within your firm, staff can contribute documents and become more comfortable with sharing knowledge.

3. blueprint. Knowledge Management

Tiger Eye Blueprint builds on iManage by offering advanced searching for knowledge and browsing. Blueprint's one-click nomination process enables know-how to be reviewed, tagged and categorised by knowledge workers before publication in your secure Blueprint library.

All user activity (including submissions, liking and social engagement) is then tracked to allow system administrators within Blueprint to create in-depth reports.

4. iManage Knowledge Unlocked

iManage RAVN Insight offers advanced enterprise search and Knowledge Graphs, to identify knowledge from all locations so that it can then be centralised and leveraged for your firm's success.

Working in partnership with Blueprint, RAVN Insight can search all data silos, with Blueprint's approved know-how prioritised in search results.
