The iManage to Docusign Integration

Seamlessly integrate iManage and Docusign with Tiger Eye Send and Sign. This intuitive connector enables users to launch Docusign's electronic signature platform from within iManage with ease.

Why Adopt Tiger Eye Send & Sign?

- ✓ Save time and work smarter with contracts by avoiding the need to manually download documents to later upload (or re-upload) to Docusign or iManage.
- ✓ Stay secure by ensuring all documents are stored in iManage within designated storage locations. Cut out the risk of signed copies of contracts remaining stored on devices (which is often required when working without the integration).
- ✓ Support your firm's environmental sustainability by safely adopting electronic signatures, reducing reliance on paper processes whilst also making it easier for clients to sign with you.

How Does Our iManage To Docusign Integration Work?

1. **Open iManage, Right Click The Document And Choose Send and Sign**
   Simply open iManage, then right click on the document and select Send and Sign to launch the Docusign platform.
2. **Send For Signature Using Docusign**
   From there, you will be guided through Docusign's platform for signature, giving you the ability to add fields and customise the process (e.g., by adding multiple signatories).
3. **Let Our Integration Manage The Filing Process**
   Signed documents and certificates of completion are then automatically returned to iManage and stored safely, ensuring your important documents, contracts and data remain secured within iManage.

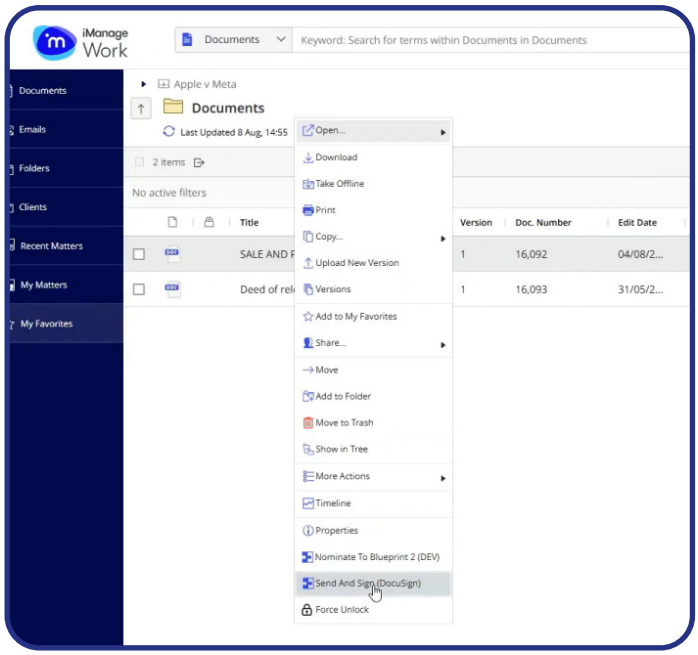
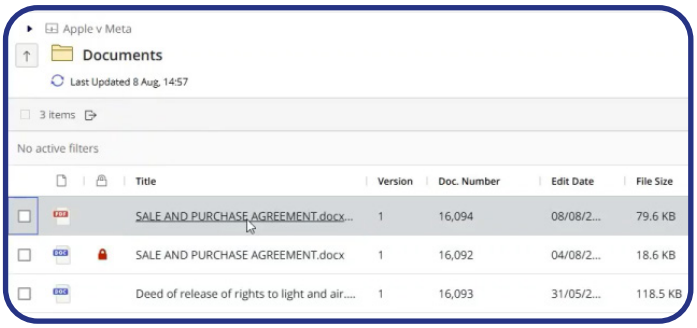
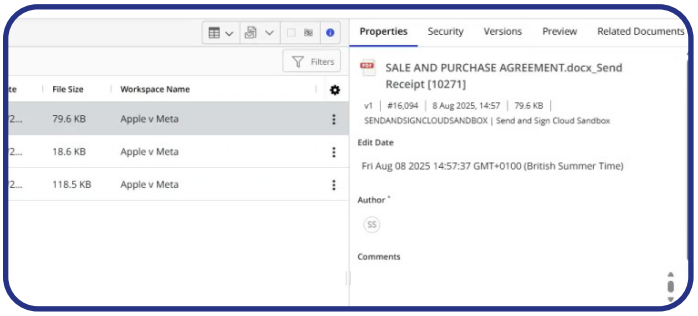
Did You Know?

Our iManage and Docusign integration is used by firms around the world including RWK Goodman and Womble Bond Dickinson.

Womble Bond Dickinson recorded significant time savings using the integration, with the firm's Docusign users **saving up to 10 minutes per document using Tiger Eye Send and Sign**.







Technical Requirements

- An active Docusign subscription.
  Please note Tiger Eye can support you with procuring this.
- iManage (Version 10.2.2+ or iManage Cloud).
- .NET 8 hosting bundle.
- A server to install the service.
  Please note the service can be co-hosted.
- An SSL certificate (in .pfx format).
- Access from the server outbound over 443 and inbound over 1443 (HTTPS).
- Opening of firewalls for specific IP ranges (as needed).
- An internal and external URL including DNS entries.
- An iManage Admin user for running the service.

Additional support and training available upon request, as well as tailored adoption packages.

About Tiger Eye
